

Substituted thienocycloalk(en)ylamino-1,3,5-triazines

Abstract

The invention relates to novel substituted thienocycloalk(en)ylamino-1,3,5-triazines of the general formula (I)

$$Z = \begin{bmatrix} R^3 \\ N \\ N \end{bmatrix} = \begin{bmatrix} R^2 \\ R^1 \end{bmatrix}$$
 (I),

in which Z, R¹, R² and R³ are as defined in the description, and to processes for their preparation, to their use as herbicides and to the intermediates required for their preparation, including their preparation processes in the case of the preferred compounds.
